

Marco Lana and Alberto Savettiere are two Italian architects who live and work in Turin. Their aim is to join different working experiences to give customers a complete project based on a multipurpose approach.

Their projects sweep from architecture to interior design, from graphic to exhibition, from industrial design to the creation of unique and custom-made objects. The continuous research of new tendencies all over the world and experimentation are the base elements to combine in their works originality, harmony, functional capacity and production easiness.

At 100% Future they presents some furniture items from their new collection for in and outdoors living.

- **Marco Lana** (architect and designer) was born in Turin and graduated from school of architecture at Politecnico of Turin in 2002. He has been officially registered as an architect since 2003 and since 2009 is a member of ADI (Associazione per il Disegno Industriale). He now works in architectural design, interior design and packaging and collaborates with leading architect's studios offices and packaging agencies.

- **Alberto Savettiere** (architect and designer) was born in Turin and graduated from the school of architecture at Politecnico of Turin in 2002. He has been officially registered as an architect since 2003. He worked in structural and plant engineer studios in Turin and Milan and had also foreign working experiences. He now works in architecture design, interior design and industrial design. Since 2001 he has been working also in an advertising company "Area-Pro" in the role of graphic and object designer.

PRIMA

Design Arch. Alberto Savettiere 2006

Table lamp mad of plexiglass and polypropylene.

Simplicity is the essence of design and light is the protagonist of this object. Prima is a table lamp designed to create a comfortable and relaxing habitat. The main characteristic of its design are the clearness of the lines and the simplicity of the shape: a circle and a rectangular cuboid that intersect each other create cutting lights and fascinating shadows. Made in polypropylene (disk) and Plexiglas (base) it works with a standard low cost lamp.

Dimensions: 35x30x10 cm. / 13.8x11.8x3.9 inches
